

Russell 2000® Small Cap Index

Ticker RTY, RUT	Asset Classes US Equity - Small Cap	Inception Date 01/01/1984
---------------------------	---	-------------------------------------

Overview

The Russell 2000® Index measures the performance of the small-cap segment of the US equity universe. The Russell 2000® Index is a subset of the Russell 3000® Index representing approximately 7% of the total market capitalization of that index, as of the most recent reconstitution. It includes approximately 2,000 of the smallest securities based on a combination of their market cap and current index membership. The Russell 2000 is constructed to provide a comprehensive and unbiased small-cap barometer and is completely reconstituted annually to ensure larger stocks do not distort the performance and characteristics of the true small-cap opportunity set.

The chart presents the change in the index value for the selected period; an individual cannot invest directly in an index. The change in the index’s value shown in the chart does not reflect the caps, spreads, trigger rates, and/or participation rates that would have applied to an index account in a fixed index annuity that determined interest credits based in part on the change in the index’s value. Past performance of the index is no guarantee of, and should not be relied upon as a predictor of the future change of the index’s value. Unless otherwise indicated, the index's performance does not include dividends.
