

Defeating the Downside

Market downturns can feel like a blow to your financial confidence — sudden, unpredictable, and often beyond your control. But what if the key to investing isn't just about avoiding the dips, but rather learning how to mitigate their impact? Defeating the downside means understanding the history behind bear markets, making informed portfolio decisions, and employing protective strategies to secure your future. With the right plans in place, you can approach the next drop not with fear but with confidence.

What the Market Has Done Over Time

Market downturns are an unavoidable part of investing. Whether triggered by economic shifts, global events, or investor sentiment, these declines can take a toll on your portfolio—and your peace of mind. Some recoveries are swift, while others take time, testing both patience and strategy. Yet history shows a consistent pattern: equity markets eventually rebound and reach new highs. The question isn't if markets will recover, but how long it will take—and how prepared you are to overcome such market volatility. Will you defeat the downside?

A Brief History of Market Crashes

Stock market drops aren't new — and they're not permanent.

- **1929: The Great Depression** - Sparked by rampant speculation and poor regulation, the market lost nearly 90% of its value from its peak. It took years to recover, but eventually, the market did bounce back and sparked a long-term era of economic expansion.

- **1987: Black Monday** - In a single day, markets plunged 22%. Panic ensued, but the economy remained stable, and the market recovered in less than two years.
- **2000: The Dot-Com Bubble** - Overvalued tech stocks collapsed, wiping out trillions. The market slowly recovered, paving the way for new industries and a housing boom.
- **2008: The Financial Crisis** - Caused largely by subprime mortgage lending, the market fell by over 50%. Yet, within five years, most indexes returned to pre-crash levels.
- **2020: COVID-19 Pandemic Crash** - A sharp, sudden drop saw the market lose 34% in just a month. Still, it turned into one of the fastest recoveries in history.

Historical Stock Market Crashes

Market Repercussions

	Beginning Date	Drawdown Percent	First Day to Reach Previous Market High	Market Performance - Since Drawdown	Number of Days to Recovery
1970 - Double Bottom Bear	1/20/1970	-20.9%	3/6/1972	26.93%	757
1987 - Black Monday	10/19/1987	-33.2%	7/26/1989	50.35%	646
2001 - The Dot-com Bubble	3/12/2001	-22.7%	5/30/2007	29.66%	2,270
2008 - The Financial Crisis	7/9/2008	-20.5%	3/28/2013	26.07%	1,723
2020 - COVID-19 Pandemic Crash	3/12/2020	-26.7%	8/18/2020	36.65%	159

A Closer Look: Bear Markets Through the Years

While dramatic crashes make headlines, bear markets — defined as a decline of 20% or more from recent highs — are a normal part of the investing cycle. They may feel alarming in the moment, but history shows they're temporary setbacks, not permanent losses.

Bear markets have happened in the S&P 500 12 times since the index expanded to include 500 stocks in 1957.¹

Take Control

Historically, the average recovery time from a major market downturn is about two years, depending on the severity of the crisis. After the 1929 crash, it took 25 years for the Dow to reclaim its previous high. Meanwhile, markets recovered from the 2020 COVID-19 crash in just five months. Staying the course, even when it's uncomfortable, has proven to be a winning strategy for long-term investors.

But not everyone has the luxury of time.

Avoiding the Downside

For retirees or those nearing retirement, a sudden drop could derail years of careful planning. That's where diversification — and safer alternatives — can make all the difference.

Balancing Growth and Safety

- **Diversify your investments** - Mix different asset classes (stocks, bonds, annuities, etc.) to spread out risk and reduce overall volatility.
- **Add protection to your portfolio** - Explore options such as fixed annuities that can preserve your principal while still supporting growth.
- **Revisit your timeline** - If your retirement plans or financial situation have changed, adjust your investment strategy accordingly.
- **Align investments with goals** - Make sure your portfolio reflects your current long-term objectives, not just past assumptions.
- **Rebalance regularly** - Shift allocations between stocks, bonds, and other assets as needed to maintain your desired level of risk.
- **Accept that diversification isn't a guarantee** - It won't eliminate losses, but it can help soften the blow during market downturns.

Non-correlated asset classes with no ties to market performance, such as fixed and fixed index annuities, can be an option for protecting your savings while providing interest potential too. Such annuities are strong examples of safe money solutions that can be used to diversify traditional asset classes.

Fixed and fixed index annuities provide:

- Tax deferral
- Guarantees against the loss of principal due to market downturns.
- The potential for credited interest
- And the reassurance of a death benefit for beneficiaries.

You don't have to fear the next market downturn. By diversifying your portfolio, adjusting to your financial goals, and using protective strategies like fixed annuities, you can take control of your financial future. Defeating the Downside isn't about avoiding every twist and turn — it's about building a plan that keeps you moving forward, no matter what the market throws your way. When you're prepared, even the downsides can't hold you back.

Connect with a financial advisor today to review your strategy, explore protection options, and start building a plan that puts you in control — no matter where the market goes next.

Neither Security Benefit nor its subsidiaries and affiliates are fiduciaries. This information is general in nature and intended for use with the general public. For additional information, including any specific advice or recommendations, please visit with your financial professional.

Annuities are issued by Security Benefit Life Insurance Company (SBL) in all states except New York.

Guarantees provided by annuities are subject to the financial strength of the issuing insurance company. Annuities are not FDIC or NCUA/NCUSIF insured; are not obligations or deposits of and are not guaranteed or underwritten by any bank, savings and loan, or credit union or its affiliates; and are unrelated to and not a condition of the provision or term of any banking service or activity.

Fixed index annuities are not stock market investments and do not directly participate in any equity, bond, other security, or commodities investments. Indices do not include dividends paid on the underlying stocks and therefore do not reflect the total return of the underlying stocks. Neither an index nor any fixed index annuity is comparable to a direct investment in the equity, bond, other security, or commodities markets.
